CRATES

Crates provide durable and secure storage for a wide range of goods. They are designed to withstand heavy-duty use, offering reliable protection during transport and storage in various industries.

VENTILATED CRATES

Ventilated crates are designed with airflow in mind, ideal for storing perishable items or materials that require ventilation. Their open design ensures proper air circulation, helping maintain product integrity.

400 x 300 Series

300 x 200 x 150mm	6 Litres
300 x 200 x 200mm	8.5 Litres

CLOSED LID CRATES

Closed lid crates feature a solid, protective lid, making them perfect for safeguarding contents from dust, dirt, or contaminants. They are ideal for storing items that require full coverage and extra security.

STACKING BIN

Stacking bins are durable, space-saving storage solutions designed for easy organization and quick access to small parts or components. Their interlocking design allows vertical stacking without compromising stability, making them ideal for warehouses, workshops, and industrial settings.

FISH CRATE

DIMENSIONS 605 x 390 x 350mm

BAKERY CRATE

DIMENSIONS 590 x 455 x 180mm

DATES CRATE

CAPACITY 47 Litres
DIMENSIONS 580 X 380 X 210mm

TOAST CRATE

CAPACITY 43 Litres
DIMENSIONS 658 x 553 x 120mm

FRUITS & VEGETABLE CRATE

CAPACITY 47 Litres
DIMENSIONS 585 x 385 x 210mm

JUMBO CRATE

CAPACITY 75 Litres
DIMENSIONS 650 x 450 x 315mm

SPILL PALLET

A spill pallet is a secondary containment solution designed to hold containers of oil, fuel, and other hazardous liquids. It captures leaks and spills from stored containers, ensuring environmental safety. Available in various sizes to accommodate multiple drums or IBCs.

Spill pallets are designed to safely contain leaks and spills from IBC tanks, jerry cans, and drip trays. Their integrated mesh platform ensures stability and easy cleaning, making them essential for industrial safety and compliance.

SPILL PALLET FOR IBC TANK

SPILL PALLET

SPILL KIT

Spill kits are essential emergency response tools designed to quickly contain and clean up hazardous liquid spills. They include absorbents, protective gear, and disposal bags, helping ensure workplace safety and environmental compliance.

Drip Trays

Prevent slippery spills by catching minor leaks and drips. Ideal for storing small drums and jerry cans, these trays help maintain a clean, safe workspace. Available in sump capacities ranging from 10 to 100 liters.

PALLETS

Pallets are robust platforms used for handling, storing, and transporting goods efficiently. Designed for forklift and pallet jack compatibility, they ensure safe and organized movement of heavy loads across warehouses and supply chains.

DRIP TRAY

PLASTIC PALLETS ADVANTAGES

- | |
|---|
| • Light weight design helps reduce shipping costs |
| • Durable and long-lasting—cost-effective over time |
| • Resistant to weather, moisture, and chemicals |
| • No heat treatment required—bug-proof and export-ready |
| • Smooth surface for safer handling and easy cleaning |
| • Fully recyclable, though less eco-friendly than wood |

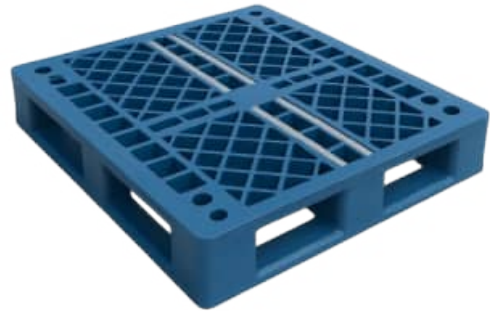

HYGIENIC PALLETS

Hygienic pallets are specially designed for clean environments like food, pharmaceutical, and medical industries. Made from smooth, non-porous plastic, they resist bacteria, are easy to clean, and meet strict hygiene and safety standards.

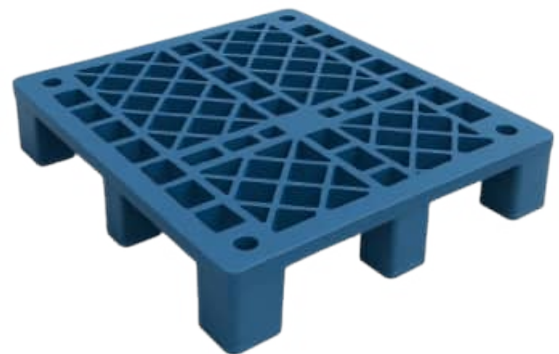

STACKABLE PALLETS

Stackable pallets are designed for efficient space-saving during storage and transport. With a solid base and reinforced structure, they allow safe vertical stacking without compromising stability, making them ideal for warehouses and distribution centers.

RACKING PALLETS

A racking pallet is a specialized pallet designed for use in pallet racking systems, allowing efficient storage and easy access to goods in warehouses. It is typically made from wood, plastic, or metal and is designed to fit securely into racking shelves for optimal space utilization and organization.

STEEL BARS PALLET

Steel bar plastic pallets are reinforced with steel bars for added strength, enabling them to carry heavier loads. They combine the durability of plastic with the support of steel, making them ideal for heavy-duty storage and transportation.

CLOSED PALLET BOX

A closed pallet box is a sturdy, enclosed storage container designed for secure transportation and storage of goods. Made from materials like plastic, wood, or metal, it features solid walls and a base that provides protection against dust, moisture, and damage. Closed pallet boxes are ideal for handling bulk items and sensitive products, offering secure and organized storage in warehouses or during shipping.

WOODEN PALLET

A wooden pallet is a sturdy, flat platform used for stacking, storing, and transporting goods efficiently. Made from durable timber, it features a structured design with slats and blocks, allowing easy handling by forklifts or pallet jacks. Ideal for logistics, warehousing, and shipping, it ensures safe and

IBC CONTAINER

An IBC (Intermediate Bulk Container) is a large, reusable container used for storing and transporting liquids and bulk materials. Made of plastic or metal, it features a durable frame and removable liner, ideal for industries like chemicals, food, and pharmaceuticals.
